Loandisk API Documentation

1. Introduction

The API supports JSON format only.

You can use the below API to make calls to your [Loandisk.com](https://www.loandisk.com) account. Since an account can have multiple branches, you will need to pass the **Branch Id** in the URL for each API call which identifies one of the branches in your account. The data will be transferred to that branch only. You can obtain the **Branch Id** and other details below.

2. First Steps

1. [Login](#)
2. Visit **Admin** → **Settings** → [API Settings](#)
3. Note down the following details:
 - **Auth Code**
 - **Public Key**
 - **Branch Id**

3. URL

`https://api-main.loandisk.com/{Public Key}/{Branch Id}/{Resource}`

{Resource} - Replace with the resource that needs to be added/updated/retrieved/deleted. For example, to post/put/get/delete borrower, replace with **borrower**. Must be all lowercase.

{Public Key} - Replace with the **Public Key** obtained at **Admin** → **Settings** → [API Settings](#).

{Branch Id} - Replace with the **Branch Id** obtained at **Admin** → **Settings** → [API Settings](#). Since an account can have multiple branches, you need to pass the **Branch Id** in each call. The data will be passed to the branch corresponding to the **Branch Id**.

4. Authentication

Visit **Admin** → **Settings** → [API Settings](#) and generate the **Auth Code**. This is used in the Authorization header. Before every call, you must pass the Auth Code in the header.

Content-Type: application/json

Authorization: Basic **Auth Code**

5. Limits

You can make 1000 requests in 5 minutes. Your IP address will be blocked if you reach this limit. This value is continually evaluated and the IP address is automatically unblocked after it falls below the limit.

You can make 10,000 requests per IP/Account per hour. If you would like to increase this limit, please contact us at support@loandisk.com.

Maximum of 20 failed login attempts allowed in 1 hour.

6. Responses

The API supports JSON format only.

Operation	Success Response	Error Response
GET	<pre>{ "response": { "TotalResults": 1200, "Page" => 1, "ReturnResults": 20, "Results": [{ "field": "field_value" }] } }</pre> TotalResults, Page, and ReturnResults will be 1 in if a single record is requested. If you are requesting multiple records, then you will need to specify the page number and results per page. In that case, it will return the page number and results found on that page. TotalResults will show the total records in the branch.	<pre>{ "error": { "type": "http", "code": "404", "message": "Not Found" } }</pre>
POST PUT	<pre>{ "response": { "Unique Id Field Name": "Unique Id Value" message string, // id of the record that has been added or updated string, // for example "borrower_id": 1038292 } }</pre>	<pre>{ "response": { "Errors": [.....] } }</pre>
DELETE	<pre>{ "response": "deleted" }</pre>	<pre>{ "error": { "type": "http", "code": "404", "message": "Not Found" } }</pre>

7. Download SDK

PHP SDK

If you intend to use PHP to connect to Loandisk, you can download the [PHP SDK here](#).

Python SDK

If you intend to use Python to connect to Loandisk, you can download the [Python SDK here](#).

Ruby SDK

If you intend to use Ruby to connect to Loandisk, you can download the [Ruby SDK here](#).

Node.js SDK

If you intend to use Node.js to connect to Loandisk, you can download the [Node.js SDK here](#).

Java SDK

If you intend to use Java to connect to Loandisk, you can download the [Java SDK here](#).

8. Postman

Please see the sample screenshots below on how to connect via Postman.

The first screenshot shows the 'Headers' tab in Postman. The URL is `https://api-main.loandisk.com/{Public Key}/{Branch Id}/borrower`. The 'Headers' tab is selected, showing 11 headers. The 'Authorization' header is set to 'Basic {Auth Code}'. Annotations indicate that '{Public Key}' should be replaced with the user's Public Key and '{Branch Id}' with the user's Branch Id. The 'Auth Code' in the Authorization header is also circled, with an annotation indicating it should be replaced with the user's Auth Code.

Key	Value	Bulk Edit
☒ Cookie ⓘ	AWSALBTG=CFb1xFU+HkU1eR1LKvZ2klcHwZegYbrCy/MkFMBYwR4MOcS...	
☒ Postman-Token ⓘ	<calculated when request is sent>	
☐ Content-Type ⓘ	text/plain	
☒ Content-Length ⓘ	<calculated when request is sent>	
☒ Host ⓘ	<calculated when request is sent>	
☐ User-Agent ⓘ	PostmanRuntime/7.43.2	
☐ Accept ⓘ	*/*	
☐ Accept-Encoding ⓘ	gzip, deflate, br	
☐ Connection ⓘ	keep-alive	
☒ Authorization	Basic {Auth Code}	

The second screenshot shows the 'Body' tab in Postman. The URL is the same. The 'Body' tab is selected, showing the 'raw' format selected. The 'JSON' format is also selected. The body content is a JSON object: `{ "borrower_firstname": "Paul", "borrower_lastname": "Jose" }`. An annotation indicates that the body should be in 'JSON format'.

```
1 {
2   "borrower_firstname": "Paul",
3   "borrower_lastname": "Jose"
4 }
```

9. Sandbox

To create a sandbox environment, please visit [Admin](#) → **Manage Branches** → [Branches](#) → **Add Branch** button. There, please create a branch with the name Test Branch. In every API call, you have to specify the **{Branch Id}** for which you would like to access or modify the records. All the branches are separate to each other and do not share any data. You can do all your testing in the Test Branch by specifying the **{Branch Id}** of the Test Branch. Once you have completed your testing, you can switch to production by changing the **{Branch Id}** to another branch where you intend to hold your production records. To see your **{Branch Id}**, please visit **Admin** → **Settings** → [API Settings](#).

10. Terms of Services

In using the API, you agree to the [Terms of Services](#) and [Privacy](#) policies. Copyright @ 2025 Loandisk.

11. Borrower

<https://api-main.loandisk.com/{Public Key}/{Branch Id}/borrower>

Action	Methods	URL Parameters	Description
Get single Borrower in Branch	GET	//{ borrower_id }	Specify the borrower_id of the Borrower that you would like to return.
Get multiple Borrowers in Branch	GET	/from/{ Page Number }/count/{ Number of Results }	Specify the page number and the number of results per page for pagination.
Get borrower from borrower_mobile field	GET	/borrower_mobile/{ borrower_mobile }	Specify the borrower mobile of the borrower.
Get borrower from borrower_email field	GET	/borrower_email/{ borrower_email }	Specify the borrower email address of the borrower.
Get borrower from borrower_unique_number field	GET	/borrower_unique_number/{ borrower_unique_number }	Specify the borrower unique number of the borrower.
Get borrower from borrower_dob field	GET	/borrower_dob/{ borrower_dob }	Specify the borrower dob of the borrower in yyyy-mm-dd format for example 2019-12-28.
Get branch_id of borrower	GET	/get_borrower_branch_id/{ borrower_id }	Specify the borrower_id of the borrower to get the branch_id. This is useful in finding borrowers in other branches.
Total Count of all Borrowers in Branch	GET	/total_count	Returns the total number of borrowers in branch
Add a new Borrower	POST	None	
Update an existing Borrower	PUT	None Warning: For PUT requests, you must <u>specify all of the data</u> that should exist including those fields that you do not want to update. So first issue a GET request and then input all of that data into the PUT request along with the updated fields. If you specify only the fields you want to update, other optional fields will be updated with empty values.	You must specify the borrower_id of the Borrower in the JSON Body Parameters below.
Move Borrower to Another Branch	PUT	//{ borrower_id }/move_branch/{ branch_id }	Specify the new branch_id of the borrower. The borrower will be moved to this branch_id . Returns branch_id if successful.
Delete a Borrower	DELETE	//{ borrower_id }	Specify the borrower_id of the Borrower that you would like to delete.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
borrower_id		Extract the values from GET borrower	Unique Id of Borrower. For PUT requests, you need to specify this in the JSON

			body parameter. For GET and DELETE, this needs to be in the URL. Ignore for POST requests.
borrower_country	Required	Click here to see the allowed Country values.	Country
borrower_firstname	Optional	Any	First Name
borrower_lastname	Optional	Any	Middle / Last Name
borrower_business_name	Optional	Any	Business Name
borrower_unique_number	Optional	Any	Unique Number
borrower_gender	Optional	<u>Select one of following values:</u> Male Female Nonbinary Other Decline to state	Gender
borrower_title	Optional	<u>Select one of following values:</u> 1 2 3 4 5 6 7	Title 1=Mr. 2=Mrs. 3=Miss 4=Ms. 5=Dr. 6=Prof. 7=Rev.
borrower_mobile	Optional	Numbers only	Mobile
borrower_email	Optional	Email Address	Email
borrower_dob	Optional	mm/dd/yyyy	Date of Birth

custom_field_21288	Required	Dropdown Box	Collateral - Is Collateral Being Held?
custom_field_21289	Required	Dropdown Box	Collateral - Type
custom_field_21290	Required	Text Area	Collateral - Description (Provide Details of Collateral) - If no enter N/A
custom_field_21291	Required	Date Field	Insurance - Insert Expiration Date For Vehicle Insurance Being Held As Collateral (If not applicable insert 01/01/1998)

12. Invite Borrower

<https://api-main.loandisk.com/{Public Key}/{Branch Id}/borrower/invite>

Invite the borrower to Loandisk. The borrower will receive the invitation email from [Admin](#)(top menu) → **Borrowers** → [Invite Borrowers Settings](#). You can see the invited borrowers at **Borrowers**(left menu) → [Invite Borrowers](#).

Action	Methods	URL Parameters	Description
Invite Borrower	GET	/b{borrower_id}	Specify the borrower_id of the borrower who is being invited to view the Client Control Panel on Loandisk. Returns Invitation sent successfully if invitation email has been sent successfully.

13. Advanced Search Borrowers

https://api-main.loandisk.com/{Public Key}/{Branch Id}/advanced_search_borrowers

Get Borrowers for the Branch by doing an Advanced Search

Action	Methods	URL Parameters	Description
Search Borrowers	POST	None	Specify the page number and the number of results per page for pagination. Also, you must specify at least 1 of the below optional search parameters.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
from	Required	Number	Specify the page number
count	Required	Number	Specify the number of results per page
borrower_type	Optional	Noloans Notactive 8 1 18 10 5 16 6 2 3 71592 71594 71593 71590 71591 71587 71588 71589 9 17	Borrower Status Noloans: Borrowers with No loans Notactive: Borrowers with No Open loans 8: Borrowers with Processing loans 1: Borrowers with Open loans 18: ----Current 10: ----Due Today 5: ----Missed Repayment 16: ----Arrears 6: ----Past Maturity 2: Borrowers with Fully Paid loans 3: Borrowers with Defaulted loans 71592: ----Investigation 71594: ----Write-Off 71593: ----Legal 71590: ----Debt Review 71591: ----Fraud 71587: ----Credit Counseling 71588: ----Collection Agency 71589: ----Sequesterate 9: Borrowers with Denied loans 17: Borrowers with Not Taken Up loans Separate multiple values with
borrower_name	Optional	Any	Borrower Name or Business Name or Group Name
borrower_email	Optional	Email Address	Borrower Email
borrower_mobile	Optional	Numbers only	Borrower Mobile

collector_access_id	Optional	86762 43725 57008	Loan Officers 86762: Chaganti Srinivas 43725: Gerlia Nairn 57008: leisha Taylor

		74779 66233	74779: Montino Roberts 66233: Robert Pantry Separate multiple values with
working_status_name_search	Optional	Employee Government Employee Private Sector Employee Owner Student Overseas Worker Pensioner Unemployed	Working Status

14. Borrower Restrictions

https://api-main.loandisk.com/{Public Key}/{Branch Id}/borrower_restrictions

Put a restriction on a borrower or the entire branch

Action	Methods	URL Parameters	Description
Get Borrower Restrictions on a borrower	GET	/ {borrower_id}	Specify the borrower_id of the borrower for which you like to get the borrower restriction values.
Place Borrower Restriction on a borrower or branch	PUT		Specify the borrower_id of the borrower for which you would like to place restrictions in the JSON Body Parameters. The borrower_id parameter can be found in Borrower . If you select restrict_type as branch , the restrictions will apply on all borrowers in the branch and the borrower_id will be ignored.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
borrower_id	Required	Extract the values from Borrower	Borrower
max_number_of_open_loans	Optional	Numbers only	Maximum Number of Open Loans Allowed
max_prin_out_amount	Optional	Numbers or Decimals(4 places) only	Maximum Principal Outstanding Amount Allowed
max_total_out_amount	Optional	Numbers or Decimals(4 places) only	Maximum Total Outstanding Amount Allowed
max_open_principal_released_amount	Optional	Numbers or Decimals(4 places) only	Maximum Principal Released Amount for Open Loans Allowed
max_all_principal_released_amount	Optional	Numbers or Decimals(4 places) only	Maximum Principal Released Amount for All Loans Allowed
do_not_allow_new_loan_if_default_loan	Optional	<u>Select one of following values:</u> 1	If Borrower has a Default Loan, stop any new loans? 1=Yes
stop_all_new_loans	Optional	<u>Select one of following values:</u> 1	Stop any New Loans to Borrower? 1=Yes
stop_all_new_loans_date	Optional	mm/dd/yyyy	Stop Loans Until the following Date?
stop_repayments_fully_paid_loans	Optional	<u>Select one of following values:</u> 1	Do not allow any new repayments for loans that are Fully Paid? 1=Yes
stop_repayments_defaulted_loans	Required	<u>Select one of following values:</u> 1	Do not allow any new repayments for loans that are Defaulted? 1=Yes
stop_repayments_restructur	Required	<u>Select one of following</u>	Do not allow any new

ed_loans		<u>values:</u> 1	repayments for loans that are Restructured? 1=Yes
min_savings_balance	Optional	Numbers or Decimals(4 places) only	Minimum Savings Balance Required for New Loan
br_description	Optional	Any	Description
restrict_type	Required	<u>Select one of following values:</u> borrower branch	Restrict borrower=Borrower Only branch=All Borrowers in this Branch

15. Loan

<https://api-main.loandisk.com/{Public Key}/{Branch Id}/loan>

Action	Methods	URL Parameters	Description
Get single Loan in Branch	GET	/loan_id	Specify the loan_id of the Loan that you would like to return.
Get multiple Loans in Branch	GET	/from/{Page Number}/count/{Number of Results}	Specify the page number and the number of results per page for pagination.
Get loan from loan_application_id field	GET	/loan_application_id/{loan_application_id}	Specify the loan_application_id of the loan for which you would like to return the loan. This is the Loan # that you type when you add a loan on the Loandisk website.
Get all loans of borrower	GET	/borrower/{borrower_id}/from/{Page Number}/count/{Number of Results}	Specify the borrower_id of the borrower for which you would like to return the loans. Also, specify the page number and the number of results per page for pagination.
Get multiple disbursements in Branch	GET	/get_multiple_disbursements/from/{Page Number}/count/{Number of Results}	Get all the multiple disbursements in the branch. Also, specify the page number and the number of results per page for pagination.
Get multiple disbursements from loan_id field	GET	/get_multiple_disbursements/{loan_id}	Specify the loan_id of the loan for which you would like to get the multiple disbursements if any
Get original loan schedule	GET	/original_loan_schedule/{loan_id}/from/{Page Number}/count/{Number of Results}	Specify the loan_id of the loan for which you would like to return the original loan schedule. Also, specify the page number and the number of results per page for pagination.
Get adjusted loan schedule	GET	/adjusted_loan_schedule/{loan_id}/from/{Page Number}/count/{Number of Results}	Specify the loan_id of the loan for which you would like to return the adjusted loan schedule. Also, specify the page number and the number of results per page for pagination.
Get branch_id from loan_id field	GET	/get_branch_id/{loan_id}	Specify the loan_id of the loan for which you would like to return the branch_id. This is useful if the loan exists in your account but you are receiving a 404 error when you query the loan in a certain branch_id.
Get branch_id from loan_application_id field	GET	/get_branch_id_from_loan_application_id/{loan_application_id}	Specify the loan_application_id of the

		action_id}	loan for which you would like to return the branch_id. The loan_application_id is the Loan # that you type when you add a loan on the Loandisk website. This is useful if the loan exists in your account but you are receiving a 404 error when you query the loan in a certain branch_id.
Add a new Loan	POST	None	
Update an existing Loan	PUT	None Warning: For PUT requests, you must <u>specify all of the data</u> that should exist including those fields that you do not want to update. So first issue a GET request and then input all of that data into the PUT request along with the updated fields. If you specify only the fields you want to update, other optional fields will be updated with empty values.	You must specify the loan_id of the Loan in the JSON Body Parameters below.
Delete a Loan	DELETE	/ {loan_id}	Specify the loan_id of the Loan that you would like to delete.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
loan_id		Extract the values from GET loan	Unique Id of Loan. For PUT requests, you need to specify this in the JSON body parameter. For GET and DELETE, this needs to be in the URL. Ignore for POST requests.
loan_product_id	Required	<u>Select one of following values:</u> 58342	Loan Product 58342=Personal Loan
borrower_id	Used only for POST	Extract the values from GET borrower	Borrower
loan_application_id	Required	Any	Loan #
loan_disbursed_by_id	Required	<u>Select one of following values:</u> 35878 35879 35880 35881 191268	Disbursed By 35878=Cash 35879=Cheque 35880=Wire Transfer 35881=Online Transfer 191268=Affinity Credit
loan_principal_amount	Required	Numbers or Decimals(2 places) only	Principal
loan_interest_amount	Optional	Numbers or Decimals(2 places) only	Interest Amount Valid only for GET requests
loan_released_date	Required	mm/dd/yyyy	Loan Release Date
loan_interest_method	Required	<u>Select one of following values:</u> flat_rate reducing_rate_equal_installments reducing_rate_equal_princip	Interest flat_rate= Flat Rate reducing_rate_equal_installments=Reducing Balance - Equal Installments reducing_rate_equal_princip

		al interest_only compound_interest_new compound_interest	al=Reducing Balance - Equal Principal interest_only=Interest-Only compound_interest_new=C omponent Interest - Accrued compound_interest=Compo und Interest - Equal Installments
loan_interest_type	Required	<u>Select one of following values:</u> percentage fixed	Interest Type percentage=I want Interest to be percentage % based fixed=I want Interest to be a fixed amount Per Cycle
loan_interest_period	Required	<u>Select one of following values:</u> Day Week Month Year Loan	Loan Interest Period Day=Per Day Week=Per Week Month=Per Month Year=Per Year Loan=Per Loan
loan_interest	Optional	Numbers or Decimals(4 places) only	Loan Interest
loan_duration_period	Required	<u>Select one of following values:</u> Days Weeks Months Years	Loan Duration Period Days=Days Weeks=Weeks Months=Months Years=Years
loan_duration	Required	Numbers only	Loan Duration

17. Due Loans

https://api-main.loandisk.com/{Public Key}/{Branch Id}/due_loans

Due Loans for the Branch

Action	Methods	URL Parameters	Description
Due Loans	POST	None	Specify the page number and the number of results per page for pagination. Also, you must specify at least from_collection_date (From Date) and to_collection_date (To Date) from the below search parameters.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
from	Required	Number	Specify the page number. Please loop through all the results to find the due loans. First, set from to 1 and count below to 500 and post. The system will return the TotalResults variable which is the total loans found in the below parameters. For example let's say TotalResults = 2000. Then specify from as 1 and count as 500. If you get no results, it means no loans are due between the dates for the first 500 loans. Then you can set from to 2 (2nd page) and count as 500 and search again which will give you the results for the second set of 500 loans and so on until you have searched for from until 4 (2000/500) which will give you the last page of results. For example, if TotalResults was 1750 and count is 500, you would search until from is 4 (roundup(1750/500)) which is 4 pages in total.
count	Required	Number	Specify the number of results per page
from_collection_date	Required	mm/dd/yyyy	From Date

loan_product_id	Optional	58342	Loan Products 58342: Personal Loan
collector_access_id	Optional	86762 43725 57008	Loan Officers 86762: Chaganti Srinivas 43725: Gerlia Nairn

		74779 66233	57008: leisha Taylor 74779: Montino Roberts 66233: Robert Pantry
borrowers_with_zero_due	Optional	Yes No	Include borrowers with zero due amounts?
loan_last_collection_only	Optional	Yes No	Show last collection only if a loan has multiple collections due between the above From Date and To Date
do_not_include_sys_gen_penalties	Optional	Yes No	Do not include System Generated Penalties that are due between the above From Date and To Date
loan_type	Optional	individual group	Individual or Group Loans. If you give group loans, this is for you.
loan_id	Optional	Extract the values from GET loan	Unique Id of Loan. This is the Loandisk System Generated Id for a loan. You can filter the due loans based on this loan_id
loan_borrower_id	Optional	Extract the values from GET borrower	Unique Id of Borrower. This is the Loandisk System Generated Id for a borrower of a loan. You can filter the due loans based on this loan_borrower_id

18. Add Additional Disbursement to Existing Loan

https://api-main.loandisk.com/{Public Key}/{Branch Id}/additional_disbursement

Action	Methods	URL Parameters	Description
Add Additional Disbursement to Existing Loan	POST	/loan_id	Specify the loan_id of the parent loan for which you would like to add a disbursement. You can only add an additional disbursement on an existing loan that was added using the Loan POST call. It is like combining multiple loans into one loan. You can add the same loan parameters as found in Loan. The following parameters will be ignored as they are already included in the parent loan_id: loan_product_id, borrower_id, loan_application_id, automatic_payments, after_maturity_extend_loan, loan_status_id.
Edit Additional Disbursement to Existing Loan	PUT		Specify the loan_id of the disbursed (child) loan in the JSON Body Parameters. You can only edit an additional disbursement that was added using the above POST call. You can edit the same loan parameters as found in Loan. The following parameters will be ignored as they are already included in the parent loan_id: loan_product_id, borrower_id, loan_application_id, automatic_payments, after_maturity_extend_loan, loan_status_id.

19. Step 1: Choose Settlement Values

https://api-main.loandisk.com/{Public Key}/{Branch Id}/early_settlement_choose_values

Action	Methods	URL Parameters	Description
Choose Settlement Values	POST	/ {loan_id}	Specify the loan_id of the loan for which you would like to view early settlement values.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
early_settlement_date	Used for POST. Required	mm/dd/yyyy	Specify the Early Settlement Date in mm/dd/yyyy format for the loan for which you would like to do early settlement. The system will give you an array of values for Interest, Fees, and Penalty for: • Pro-Rata Balance until Settlement Date • Due Balance until Last Collection date • Due Balance until Next Collection date • Total Pending Balance You can then choose the values in the early_settlement_view_loan_schedule endpoint below to see the proposed loan schedule.

20. Step 2: View Proposed Loan Schedule with Settlement Values

https://api-main.loandisk.com/{Public Key}/{Branch Id}/early_settlement_view_loan_schedule

Action	Methods	URL Parameters	Description
View Proposed Loan Schedule with Settlement Values	POST	/ {loan_id}	Specify the loan_id of the loan for which you would like to view the proposed loan schedule based on the settlement values. You can then choose the values in the early_settlement_edit_schedule endpoint below to confirm the early settlement.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
early_settlement_date	Used for POST. Required	mm/dd/yyyy	Specify the Early Settlement Date for the loan_id
interest_paid_type	Used only for POST Optional	Choose one of the below values: - add_payments_until_early_settlement_date - add_payments_until_next_collection_date - add_total_payments_on_the_loan	Specify how you want to include the interest payments (if any) on the loan - add_payments_until_early_settlement_date - Add Payments until Early Settlement Date - add_payments_until_next_collection_date - Add Payments until Next Collection Date from Early Settlement Date - add_total_payments_on_the_loan - Add Total Payments on the Loan If you do not specify a value, the payments until the early_settlement_date will be counted.
interest_due	Used only for POST Optional	Numbers or Decimals(4 places) only	Specify the total Interest net due for the early settlement. You can choose one of the Interest values in the early_settlement_choose_values endpoint or enter your own value. If you do not specify a value, the system will assume that interest should be 0.
penalty_paid_type	Used only for POST Optional	Choose one of the below values: - add_payments_until_early_settlement_date - add_payments_until_next_collection_date	Specify how you want to include the penalty payments (if any) on the loan add_payments_until_early_settlement_date - Add

		• add_total_payments_on_the_loan	Payments until Early Settlement Date • add_payments_until_next_collection_date - Add Payments until Next Collection Date from Early Settlement Date • add_total_payments_on_the_loan - Add Total Payments on the Loan If you do not specify a value, the payments until the early_settlement_date will be counted.
penalty_due	Used only for POST Optional	Numbers or Decimals(4 places) only	Specify the total Penalty net due for the early settlement. You can choose one of the Penalty values in the early_settlement_choose_values endpoint or enter your own value. If you do not specify a value, the system will assume that penalty should be 0.
fee_id_paid_type_9755	Used only for POST Optional	Choose one of the below values: • add_payments_until_early_settlement_date • add_payments_until_next_collection_date • add_total_payments_on_the_loan	Specify how you want to include the Loan Fee Test payments (if any) on the loan. • add_payments_until_early_settlement_date - Add Payments until Early Settlement Date • add_payments_until_next_collection_date - Add Payments until Next Collection Date from Early Settlement Date • add_total_payments_on_the_loan - Add Total Payments on the Loan If you do not specify a value, the payments until the early_settlement_date will be counted.
fee_id_due_9755	Used only for POST Optional	Numbers or Decimals(4 places) only	Loan Fee Test Specify the total Loan Fee Test net due for the early settlement. You can choose one of the values in the early_settlement_choose_values endpoint or enter your own value. If you do not specify a value, the system will assume that Loan Fee Test should be 0.
fee_id_paid_type_4801	Used only for POST Optional	Choose one of the below values: • add_payments_until_early_settlement_date	Specify how you want to include the VAT payments (if any) on the loan. • add_payments_until_early_settlement_date - Add

		• add_payments_until_next_collection_date • add_total_payments_on_the_loan	Payments until Early Settlement Date • add_payments_until_next_collection_date - Add Payments until Next Collection Date from Early Settlement Date • add_total_payments_on_the_loan - Add Total Payments on the Loan If you do not specify a value, the payments until the early_settlement_date will be counted.
fee_id_due_4801	Used only for POST Optional	Numbers or Decimals(4 places) only	VAT Specify the total VAT net due for the early settlement. You can choose one of the values in the early_settlement_choose_values endpoint or enter your own value. If you do not specify a value, the system will assume that VAT should be 0.
fee_id_paid_type_4806	Used only for POST Optional	Choose one of the below values: • add_payments_until_early_settlement_date • add_payments_until_next_collection_date • add_total_payments_on_the_loan	Specify how you want to include the VAT payments (if any) on the loan. • add_payments_until_early_settlement_date - Add Payments until Early Settlement Date • add_payments_until_next_collection_date - Add Payments until Next Collection Date from Early Settlement Date • add_total_payments_on_the_loan - Add Total Payments on the Loan If you do not specify a value, the payments until the early_settlement_date will be counted.
fee_id_due_4806	Used only for POST Optional	Numbers or Decimals(4 places) only	VAT Specify the total VAT net due for the early settlement. You can choose one of the values in the early_settlement_choose_values endpoint or enter your own value. If you do not specify a value, the system will assume that VAT should be 0.

21. Step 3: Edit Loan Schedule with the Proposed Loan Schedule

https://api-main.loandisk.com/{Public Key}/{Branch Id}/early_settlement_edit_schedule

Action	Methods	URL Parameters	Description
Edit Loan Schedule with the Proposed Loan Schedule	POST	/ {loan_id}	Specify the loan_id of the loan for which you would like to perform early settlement.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
early_settlement_date	Used for POST. Required	mm/dd/yyyy	Specify the Early Settlement Date for the loan_id
interest_paid_type	Used only for POST Optional	Choose one of the below values: - add_payments_until_early_settlement_date - add_payments_until_next_collection_date - add_total_payments_on_the_loan	Specify how you want to include the interest payments (if any) on the loan - add_payments_until_early_settlement_date - Add Payments until Early Settlement Date - add_payments_until_next_collection_date - Add Payments until Next Collection Date from Early Settlement Date - add_total_payments_on_the_loan - Add Total Payments on the Loan If you do not specify a value, the payments until the early_settlement_date will be counted.
interest_due	Used only for POST Optional	Numbers or Decimals(4 places) only	Specify the total Interest net due for the early settlement. You can choose one of the Interest values in the early_settlement_choose_values endpoint or enter your own value. If you do not specify a value, the system will assume that interest should be 0.
penalty_paid_type	Used only for POST Optional	Choose one of the below values: - add_payments_until_early_settlement_date - add_payments_until_next_collection_date - add_total_payments_on_the_loan	Specify how you want to include the penalty payments (if any) on the loan - add_payments_until_early_settlement_date - Add Payments until Early Settlement Date - add_payments_until_next_collection_date - Add Payments until Next Collection Date from Early Settlement Date

			• add_total_payments_on_the_loan - Add Total Payments on the Loan If you do not specify a value, the payments until the early_settlement_date will be counted.
penalty_due	Used only for POST Optional	Numbers or Decimals(4 places) only	Specify the total Penalty net due for the early settlement. You can choose one of the Penalty values in the early_settlement_choose_values endpoint or enter your own value. If you do not specify a value, the system will assume that penalty should be 0.
fee_id_paid_type_9755	Used only for POST Optional	Choose one of the below values: • add_payments_until_early_settlement_date • add_payments_until_next_collection_date • add_total_payments_on_the_loan	Specify how you want to include the Loan Fee Test payments (if any) on the loan. • add_payments_until_early_settlement_date - Add Payments until Early Settlement Date • add_payments_until_next_collection_date - Add Payments until Next Collection Date from Early Settlement Date • add_total_payments_on_the_loan - Add Total Payments on the Loan If you do not specify a value, the payments until the early_settlement_date will be counted.
fee_id_due_9755	Used only for POST Optional	Numbers or Decimals(4 places) only	Loan Fee Test Specify the total Loan Fee Test net due for the early settlement. You can choose one of the values in the early_settlement_choose_values endpoint or enter your own value. If you do not specify a value, the system will assume that Loan Fee Test should be 0.
fee_id_paid_type_4801	Used only for POST Optional	Choose one of the below values: • add_payments_until_early_settlement_date • add_payments_until_next_collection_date • add_total_payments_on_the_loan	Specify how you want to include the VAT payments (if any) on the loan. • add_payments_until_early_settlement_date - Add Payments until Early Settlement Date • add_payments_until_next_collection_date - Add Payments until Next Collection Date from Early Settlement Date

			• add_total_payments_on_the_loan - Add Total Payments on the Loan If you do not specify a value, the payments until the early_settlement_date will be counted.
fee_id_due_4801	Used only for POST Optional	Numbers or Decimals(4 places) only	VAT Specify the total VAT net due for the early settlement. You can choose one of the values in the early_settlement_choose_values endpoint or enter your own value. If you do not specify a value, the system will assume that VAT should be 0.
fee_id_paid_type_4806	Used only for POST Optional	Choose one of the below values: • add_payments_until_early_settlement_date • add_payments_until_next_collection_date • add_total_payments_on_the_loan	Specify how you want to include the VAT payments (if any) on the loan. • add_payments_until_early_settlement_date - Add Payments until Early Settlement Date • add_payments_until_next_collection_date - Add Payments until Next Collection Date from Early Settlement Date • add_total_payments_on_the_loan - Add Total Payments on the Loan If you do not specify a value, the payments until the early_settlement_date will be counted.
fee_id_due_4806	Used only for POST Optional	Numbers or Decimals(4 places) only	VAT Specify the total VAT net due for the early settlement. You can choose one of the values in the early_settlement_choose_values endpoint or enter your own value. If you do not specify a value, the system will assume that VAT should be 0.

22. Delete Early Settlement

https://api-main.loandisk.com/{Public Key}/{Branch Id}/early_settlement_delete

Action	Methods	URL Parameters	Description
Delete early settlement on loan	DELETE	/loan_id	Specify the loan_id of the loan for which you would like to delete the early settlement.

23. Repayment

<https://api-main.loandisk.com/{Public Key}/{Branch Id}/repayment>

Action	Methods	URL Parameters	Description
Get single Repayment in Branch	GET	//{ repayment_id }	Specify the repayment_id of the Repayment that you would like to return.
Get multiple Repayments in Branch	GET	/from/{ Page Number }/count/{ Number of Results }	Specify the page number and the number of results per page for pagination.
Get all repayments of loan	GET	/loan/{ loan_id }/from/{ Page Number }/count/{ Number of Results }	Specify the loan_id of the loan for which you would like to return the repayments. Also, specify the page number and the number of results per page for pagination.
Add a new Repayment	POST	None	
Update an existing Repayment	PUT	None Warning: For PUT requests, you must <u>specify all of the data</u> that should exist including those fields that you do not want to update. So first issue a GET request and then input all of that data into the PUT request along with the updated fields. If you specify only the fields you want to update, other optional fields will be updated with empty values.	You must specify the repayment_id of the Repayment in the JSON Body Parameters below.
Delete a Repayment	DELETE	//{ repayment_id }	Specify the repayment_id of the Repayment that you would like to delete.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
repayment_id		Extract the values from GET repayment	Unique Id of Repayment. For PUT requests, you need to specify this in the JSON body parameter. For GET and DELETE, this needs to be in the URL. Ignore for POST requests.
loan_id	Used only for POST	Extract the values from GET loan	
repayment_amount	Optional	Numbers or Decimals(2 places) only	Repayment Amount
loan_repayment_method_id	Required	Extract the values from GET repayment_method	Repayment Method
repayment_collected_date	Required	mm/dd/yyyy	Collection Date
collector_id	Required	Extract the values from GET collector	Collected By
repayment_backdate	Optional	<u>Select one of following values:</u> 1	Backdate Repayment 1=Backdate Repayment

repayment_backdated_date	Optional	mm/dd/yyyy	Apply Repayment to a Backdated Date Valid only if <u>repayment_backdate</u> is set to 1
repayment_adjust_remaining_schedule	Optional	<u>Select one of following values:</u> 1	Recalculate remaining schedule with balance principal amount 1=Recalculate remaining schedule with balance principal amount
repayment_adjust_remaining_schedule_pro_rata	Optional	<u>Select one of following values:</u> 1 2	Adjust interest on a pro-rata basis until the Collection Date 1=Adjust interest on a pro-rata basis until the Collection Date selected above and keep excess interest 2=Adjust interest on a pro-rata basis until the Collection Date selected above and remove excess interest Valid only if <u>repayment_adjust_remaining_schedule</u> is set to 1
repayment_manual_composition	Optional	<u>Select one of following values:</u> 1	Allocate repayment amount manually based on the below values 1=Allocate repayment amount manually based on the below values
principal_repayment_amount	Optional	Numbers or Decimals(2 places) only	Principal Amount Valid only if <u>repayment_manual_composition</u> is set to 1
interest_repayment_amount	Optional	Numbers or Decimals(2 places) only	Interest Amount Valid only if <u>repayment_manual_composition</u> is set to 1
fees_repayment_amount	Optional	Numbers or Decimals(2 places) only	Fees Amount Valid only if <u>repayment_manual_composition</u> is set to 1
penalty_repayment_amount	Optional	Numbers or Decimals(2 places) only	Penalty Amount Valid only if <u>repayment_manual_composition</u> is set to 1
loandisk_system_date	Optional	Any	Loandisk System Date Valid only for GET requests
repayment_description	Optional	Any	Description / Comments
dea_cash_bank_account	Optional	<u>Select one of following values:</u> 0 32637 43001 43833 43834 43835	Cash/Bank 0=Cash 32637=1350004966 43001=Bank of The Bahamas 1350004966 43833=Bank of The Bahamas 1350005339 43834=Bank of The

custom_field_15664	Optional	Decimal Field	Trailing Payment 2
custom_field_15665	Optional	Decimal Field	Trailing Payment 3
custom_field_14070	Optional	Decimal Field	Overpayment 1
custom_field_14067	Optional	Decimal Field	Underpayment 1
custom_field_8495	Optional	Dropdown Box	Loan Officer
custom_field_10819	Optional	Dropdown Box	Contract Phase
custom_field_10820	Optional	Dropdown Box	Contract Status
custom_field_8271	Optional	Date Field	Payment Made Date
custom_field_8287	Optional	Date Field	Next Payment Date
custom_field_8288	Optional	Decimal Field	Next Payment Amount
custom_field_8289	Optional	Number Field	Outstanding Payments Number
custom_field_6824	Optional	Number Field	Months

24. Repayment Method

https://api-main.loandisk.com/{Public Key}/{Branch Id}/repayment_method

Action	Methods	URL Parameters	Description
Get single Repayment Method in Branch	GET	<code>/loan_repayment_method_id</code>	Specify the loan_repayment_method_id of the Repayment Method that you would like to return.
Get multiple Repayment Methods in Branch	GET	<code>/from/{Page Number}/count/{Number of Results}</code>	Specify the page number and the number of results per page for pagination.
Add a new Repayment Method	POST	None	
Update an existing Repayment Method	PUT	None Warning: For PUT requests, you must <u>specify all of the data</u> that should exist including those fields that you do not want to update. So first issue a GET request and then input all of that data into the PUT request along with the updated fields. If you specify only the fields you want to update, other optional fields will be updated with empty values.	You must specify the loan_repayment_method_id of the Repayment Method in the JSON Body Parameters below.
Delete a Repayment Method	DELETE	<code>/loan_repayment_method_id</code>	Specify the loan_repayment_method_id of the Repayment Method that you would like to delete.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
loan_repayment_method_id		Extract the values from GET repayment_method	Unique Id of Repayment Method. For PUT requests, you need to specify this in the JSON body parameter. For GET and DELETE, this needs to be in the URL. Ignore for POST requests.
loan_repayment_method_name	Required		Name

25. Collected By

<https://api-main.loandisk.com/{Public Key}/{Branch Id}/collector>

Action	Methods	URL Parameters	Description
Get single Collected By in Branch	GET	/ {collector_id}	Specify the collector_id of the Collected By that you would like to return.
Get multiple Collected Bys in Branch	GET	/from/{Page Number}/count/{Number of Results}	Specify the page number and the number of results per page for pagination.
Add a new Collected By	POST	None	
Update an existing Collected By	PUT	None Warning: For PUT requests, you must <u>specify all of the data</u> that should exist including those fields that you do not want to update. So first issue a GET request and then input all of that data into the PUT request along with the updated fields. If you specify only the fields you want to update, other optional fields will be updated with empty values.	You must specify the collector_id of the Collected By in the JSON Body Parameters below.
Delete a Collected By	DELETE	/ {collector_id}	Specify the collector_id of the Collected By that you would like to delete.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
collector_id		Extract the values from GET collector	Unique Id of Collected By. For PUT requests, you need to specify this in the JSON body parameter. For GET and DELETE, this needs to be in the URL. Ignore for POST requests.
collector_name	Required	Any	Collector Name
collector_branch_ids	Used only for POST	<u>Multi Select:</u> [12351, 16209, 18279, 19017, 19527, 20212, 20459, 21522, 22287, 24102, 26155, 26281, 36197, 36198, 40279, 41860, 41888, 51238, 56545, 58537,	Branch 12351=Tim Branch 16209=SBDC 18279=Simplified Lending Branch 19017=R & M 19527=G&L 20212=D 20459=L&G 21522=Staff Loans 22287=CMEX 24102=LAMP Branch 26155=Interest Only SL Clients 26281=E&S 36197=SL ABL 36198=SL BUSINESS LOANS 40279=Sebas Branch 41860=Fraud Investigation Branch 41888=Deleted Loans 51238=Test Branch - Retail

26. Advanced Search Repayments

https://api-main.loandisk.com/{Public Key}/{Branch Id}/advanced_search_repayments

Get Repayments for the Branch by doing an Advanced Search

Action	Methods	URL Parameters	Description
Search Repayments	POST	None	Specify the page number and the number of results per page for pagination. Also, you must specify at least 1 of the below optional search parameters.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
from	Required	Number	Specify the page number
count	Required	Number	Specify the number of results per page
repayment_borrower_name	Optional	Any	Borrower Name or Business Name or Group Name
loan_application_id	Optional	Any	Loan Unique Number
repayment_method_id	Optional	Extract the values from GET repayment_method	Repayment Method. Separate multiple values with

31. E-Signature for Loan

<https://api-main.loandisk.com/{Public Key}/{Branch Id}/signature/loan>

Send E-Signature for a specific loan.

Action	Methods	URL Parameters	Description
Get E-Signature Update	GET	/signature_id/{ esignature_id }	Specify the esignature_id of the E-Signature. You will receive details on whether the E-Signature has been signed.
Add a new E-Signature for Loan	POST	None	Send an email to the borrower for E-Signature on a specific loan.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
loan_id	Used for POST and GET. Required	Extract the values from GET Loan	For POST, you must specify the loan_id. The system will take the document (uploaded at Loan Templates: Applications/Agreements) from the below loan_template_id and replace the placeholders in the document with the data from the loan_id.
email_account_id	Used only for POST Required	1622 1164 1626	Borrower will be able to reply to the email located in the following email accounts: 1622=ian@slendingbahamas.com 1164=robert@slendingbahamas.com 1626=slpay@slendingbahamas.com
loan_template_id	Used only for POST Required	5181	Select the Loan Template to send to the user: 5181=SBDC Guarantee
email_subject	Used only for POST Required	Any	The subject text of the email that will be sent to the borrower
email_message	Used only for POST Required	Any	The message text of the email that will be sent to the borrower. The LinkToDocuments placeholder must be present in the message. This will be replaced with the links to the PDF documents.
esignature_id	Returned if Send E-Signature is successful.		
borrower_fullname	Used only for GET	Any	Full Name of the borrower
borrower_email	Used only for GET	Any	Email of the borrower
esignature_email_sent_date_time	Used only for GET	Any	Email Sent date and time
esignature_original_file	Used only for GET	Any	Original File link without the

			e-signature
esignature_signed_file	Used only for GET	Any	Signed File link with the e-signature
esignature_date	Used only for GET	Any	E-Signature date and time
esignature_ip_address	Used only for GET	Any	IP Address of the person that signed the document
esignature_browser	Used only for GET	Any	Browser of the person that signed the document
Opened	Used only for GET	Any	Date and time when the document was opened
Browser	Used only for GET	Any	Browser of the person that opened the document
IP Address	Used only for GET	Any	IP Address of the person that opened the document

32. Staff

<https://api-main.loandisk.com/{Public Key}/ma/staff>

Action	Methods	URL Parameters	Description
Authenticate Staff	GET	/authenticate/email/{ staff_email_encoded }/password/{ staff_password_encoded }	Specify the staff_email_encoded (which is the staff email encoded in base 64) that the staff member uses to login and the staff_password_encoded (which is the staff password encoded in base 64). If staff login details are correct, you will be returned a token , token expiry date, company name, and the branches that the staff can access,
Authenticate Staff Token	GET	/authenticate/staff_token/{ token }	Specify the token from the above Authenticate Staff call. If token is valid and not expired, it will return true.

33. Upload Files

`https://api-main.loandisk.com/{Public Key}/{Branch Id}`

Returns an AWS S3 Presigned URL (**presigned_url**) and a unique **file_id**.

You can use the AWS Presigned URL to submit a PUT request with the file and upload directly from your server to S3. The Presigned URL is valid only for 15 minutes so you must upload your file within that time limit. For each file, please submit a new request to get a new Presigned URL. Please note that after you upload, the file will show in 15-30mins on your Loandisk account.

Action	Methods	URL Parameters	Description
Borrower	GET	/borrower/{borrower_id}/upload_file_extension/{file_name}	Specify the borrower_id of the borrower and the name of the file in file_name that you want to upload. You will get an AWS S3 Presigned URL (presigned_url) and a unique file_id .
Loan	GET	/loan/{loan_id}/upload_file_extension/{file_name}	Specify the loan_id of the loan and the name of the file in file_name that you want to upload. You will get an AWS S3 Presigned URL (presigned_url) and a unique file_id .

34. Download File

`https://api-main.loandisk.com/{Public Key}/{Branch Id}`

Returns an AWS S3 Presigned URL (**presigned_url**) which you can use to download the file. Please note that the link is only valid for 15 minutes.

Action	Methods	URL Parameters	Description
Get Link to Download File	GET	/get_file/{ file_id }	Specify the file_id of the file that you want to download. You will get an AWS S3 Presigned URL (presigned_url) which you can use to download the file.

35. Download Daily Backups

`https://api-main.loandisk.com/{Public Key}/{Branch Id}`

To enable daily backups, please visit **Admin** → **Backups** → [Backup Settings](#).

Returns the daily backups for the last 30 days as AWS S3 Presigned Links. The {Branch Id} parameter can be any branch in your account and is not relevant to the backup.

Action	Methods	URL Parameters	Description
Get Link to Download Backup	GET	/download_daily_backup	Returns the URL to download daily backups of your account in a Zip file.

36. Disbursement Report

https://api-main.loandisk.com/{Public Key}/{Branch Id}/disbursement_report

Get the Loan Disbursement Report. This is also available on the UI at **Reports**(left menu) → **Disbursement Report**.

Action	Methods	URL Parameters	Description
Search Loans	POST	None	Specify the page number and the number of results per page for pagination. Also, you must specify at least 1 of the below optional search parameters.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
